

ENVIRONMENTAL AND ENERGY POLICY

The management at Metalfusioni has decided to proactively continue improving the environmental and energy performance of its processes to reduce the impact on the environment and ensure energy efficiency going forward. Metalfusioni has therefore prepared the following environmental and energy policy and notified all interested parties to confirm its commitment to establishing and actively maintaining an integrated management system that covers all company processes:

“Safeguarding the environment and efficient energy use are an integral part of all Metalfusioni’s processes, including the purchase of products and services; the company achieves its commitment to continually improving in the environmental and energy field by establishing and periodically reviewing objectives and goals and implementing management programmes and preventative actions.

Metalfusioni provides all the necessary resources and information in pursuit of its environmental and energy objectives.

Metalfusioni supports long-term sustainable development and, as a result, strives for efficient use of energy and natural resources, promotes systems to recover and recycle materials, and takes action to prevent and minimise pollution.

Metalfusioni undertakes to meet, and even surpass, all the applicable compulsory environmental and energy requirements, with a particular focus on internationally established requirements and standards.”
